Thank you for registering your interest in EMC. We appreciate your time and look forward to your response. We have received your request and have placed it in our queue. It will be reviewed by a member of our team within 2 business days. Does anyone know what this means and if I've actually been selected. A: You've been selected. They have received your request and have placed it in our queue. They need to review and decide what they want to do

with your request. They have placed it in their queue for them to consider. It will be reviewed by a member of their team within 2 business days.

Q: Can't understand the logic behind the GET method on the Android WebView I've spent a fair amount of time lately trying to implement the WebView into my app, and I can't seem to figure out how the initial call works. I know it relies on the intent keyword, but after I've set up the webview to not override the back button on the home activity and set the user-agent string to that of my app, the app does not get called when opening the following URLs: To my understanding it should be looking for the page at the initial URL and since the request is coming from an unsecure channel, it is redirected to the startURL specified in the WebViewClient, which I confirm to be right by logging it to the logcat. I know it's a little background, but can someone explain what I'm missing or even if there's a library I can use to help

me with this to avoid having to write the logic myself? A: This seems to be a bug with the WebKit framework. I submitted the issue to Google this morning with the help of the Chromium project where they are currently working on the WebKit. The issue is a bit of a catch 22 as I was able to get started off, but an error was thrown on me while loading the page. The problem is that they were not checking the intent to see if it was a valid request. If the page gets routed to a different domain, it will stay there until the user disconnects and this
